CHRYSANTHEMUMS

F. A. SPIVEY

"The Chrysanthemum Man"

P. O. BOX 574 MONTGOMERY, ALA.

P R E F A C E

TO MY MANY FLOWER-MINDED FRIENDS AND CUSTOMERS.—Once again I find myself submitting only a variety list instead of a descriptive catalogue. I now have so many different varieties that to adequately describe each one would require a good-sized booklet—and that would run into real money when it came to paying the printer, besides the extra labor involved. Then too—I never have any difficulty in disposing of what plants I have surplus, so I guess from now on I will confine myself to variety lists instead of descriptive catalogues. This imposes no burden on my customer-friends, as practically all of them know mum varieties well enough not to require a description when it comes to selecting varieties they wish to grow each year.

Blooming dates are very much desired by most people who grow mums outside (as most of my customer-friends do), and I have included them. However, they are approximations only and I have leaned over backwards in trying not to convey the wrong impression as to blooming dates. If there is any error it will be that the variety blooms **earlier** (not later) than the date I have given. In figuring blooming dates for your locality, remember the blooming date advances as one goes north and recedes as one goes south. For instance a variety in full bloom here will not reach a similar stage in New Orleans until a week later. This should enable you to adjust the dates to your locality.

Delivery will be made this spring—from the last of March on, and will consist of small “plants”—not “rooted cuttings” that require potting up and growing on some time before they can be set in their permanent location. My plants can be set in their permanent location outside promptly on arrival. They will be shipped bare root, wrapped in damp moss and then carefully packed in excelsior.

I realize quite well that there seems to be a “racket” in the mum business—often a person will order certain particular varieties, state very specifically that only the **varieties ordered are desired**, care for them so carefully during the hot summer, and then have them bloom out inferior varieties that fall. It is sad to relate, but true nevertheless, that some growers will ship one’s order correct as to label—BUT woefully wrong when it comes to blooming. Nature seems to have unintentionally aided in this “racket”, as with few exceptions it is impossible to tell one variety from another in the plant or cutting stage.

Nothing makes me madder than to be duped in such a manner (and I have often been so duped), and I have resolved to make my little mum business unique in that you will get what you order, or if you permit substitution, to correctly label the plant I ship. Most of my business now is repeat orders—so that policy must be appreciated by discriminating flower-friends.

To carry out this policy it is necessary that I personally gather, label, pack and ship each order myself (which necessarily limits it to a small volume), and in return I would appreciate a postcard stating the condition of the plants on arrival, as well as any suggestions you may have towards improving my packing methods. (I have received some good suggestions from customers).

However, being human, an occasional error will occur, and in such cases I would prefer to know about it—rather than be judged guilty of deliberate mis-labeling.

Now this careful packing takes TIME, MATERIAL and STAMPS for parcel post, as all small orders will go for-

ward by prepaid parcel post (Large orders at special prices will go by express, COLLECT). To cover this expense I am asking each customer to add \$.50 to the total of the order when the same is \$5.00 or less to cover transportation and packing costs. In cases where the order runs from \$5.00 to \$10.00 please add \$.75 to the order, and \$1.00 when the order amounts to more than \$10.00. I practically always include a few plants gratis with each order, so you will be well repaid for this small additional charge.

If interested in quantity, most standard and not-too-scarce varieties can be furnished in lots of 25 and multiples thereof of one variety at around 12½ cents each, but please write me first the varieties you want and how many of each, before you order as some varieties are slow propagators and I could not supply them in quantity at any price.

Now about the English Chrysanthemums we are hearing so much about these days; it seems they came over from England to western Canada a few years ago, and from there spread over the United States. Even as late as 1941 few varieties were outside the State of Washington. Since then, however, they have moved fast—and with ever increasing popularity in the central and northern states. This popularity is largely due to the unusually early blooming of these varieties—they bloom well in advance of the ordinary large-flowering varieties. Naturally I tried some, and while I found them very good, as a general rule they are not as large as many standard varieties that can be grown outside in the southern tier of states. Hence I make the prediction that while they may become very popular in the central and northern states, they will not replace the truly “large-flowering” or “football” varieties grown in greenhouses, and in the deep South in the open garden. Owing to their earliness they do fill a distinct need farther north, and as I grew a few more English varieties in 1947 I am listing a few more of those I consider good. As they are still in the experimental stage with me I would appreciate your comments on the behavior of the English varieties in your own yard or garden in 1948.

During my over 15 years experience in dealing with the public I have found only rare instances of dishonesty—practically all people who grow flowers are scrupulously honest, but in order to protect myself in these rare instances I wish it distinctly understood that I give no warranty expressed or implied, as to description, quality or productiveness of any plants I send out.

With the above explanation and under the conditions stated, I am offering limited quantities of the mum varieties listed within.

F. A. SPIVEY

P. O. Box 574, Montgomery, Alabama

P.S.—As a personal favor to me, after you have signed your name, PLEASE print your name immediately underneath the written signature. I have lost far too much religion trying to figure out people's names, and I am sure you will agree that none of us have any religion to lose.

P.P.S.—I have received a world of comment on the above postscript, but I still stick to my guns that nothing makes me lose my religion quicker than trying to figure out a half-legible signature, so I am leaving it in again.

LARGE-FLOWERING (standards, commercials and exhibitions).

White

Variety.	Blooming date (approx.)	Price each.
SMITH'S EARLY WHITE, semi-incurved.....	Oct. 13	20c
QUAKER MAID, formal, incurved.....	Oct. 15	20c

VALHALLA, large, velvety garnet, single.....	Oct. 28	25c

(Be sure to include packing and parcel post charges)

NOTICE

Over the past ten years several thousand people have written in, asking that I place their name on my mailing list. This I have done, and as a result have a far-too-long mailing list. I am sure that a number of people who requested my mum list are for one reason or another no longer interested in growing mums. Hence I have concluded to ask each customer-friend to write me a postcard if he or she wishes to be continued on my mailing list. I will conclude that those who do not request their names be continued on the list, are no longer interested and I will drop their names from future lists. This is important—if you wish to receive future lists of surplus mum plants please send in a postcard so stating—OTHERWISE no more lists will be mailed to you.

SPRAY INFORMATION

Last year I sent out a little leaflet on Thrip and Septoria (Leaf-spot) damage to mums, as I felt many people were not familiar with the damage the tiny Thrip can cause, and did not know what caused so many of the lower leaves to turn black—sometimes more than half way up the stalk by blooming time. I advocated the use of a spray or dust composed of some form of DDT and Fermate—the DDT to control the Thrip and the Fermate for the Septoria or Leaf-spot. However, I soon found out in the spring that I could not get enough Fermate, but could get plenty of DDT. This year I am going to use DDT and some standard fungicide that I **can get**, such as Bordeaux Mixture, as it is absolutely necessary if one grows mums outside to provide some spray or dust schedule to control these two enemies of the mum, and am passing this information along to my customer-friends who no doubt are faced with a similar problem as Thrip and Leaf-spot are widely scattered over the country. Take my advice and have your spray or dust mixture ready and keep all outside mums well protected during the growing season or you are likely to be woefully disappointed in the blooms you will receive this fall. Adequate coverage will require frequent spraying or dusting during rainy spells, but the results are well worth the effort involved.
